## **Patients Doctors Admissions** PK patient id : Integer PK doctor id : Integer (assumed for FK) PK admission id : Integer Relationship: medical conditions name: Text FK patient id → Patients.patient id 1 ... \* Relationship: patients age: Integer $1 \dots *$ FK doctor id $\rightarrow$ Doctors.doctor\_id gender : Text Relationship: test results admission date: Date discharge date: Date (nullable) 1 ... \* **Medical Conditions** Test\_Results PK condition id : Integer PK test result id : Integer FK admission id → Admissions.admission id FK admission id → Admissions.admission id test name: Text condition: Text result : Text

## Notes:

• PK = Primary Key, FK = Foreign Key

• Doctors table in source PDF lists relationship links only; a PK doctor\_id was added to support Admissions.doctor\_id.
